Peijie Ju

PhD Candidate in Economics | University of Bristol

peijie.ju@bristol.ac.uk

Education

PhD in Economics, University of Bristol 2022–present

Supervisors: Professor Helene Turon and Peter Spittal.

MRes in Economics, University of Bristol 2021–2022

MSc in Economics, North Carolina State University 2019–2021

BSc in Investment, Southwestern University of Finance and Economics, China 2010–2014

Research Interests

Labour economics; applied microeconomics; health economics; occupational mobility and mismatch.

Research Papers

Skill-Based Labour Market Segmentation and Mismatch Dynamics in the UK, 2016–2022

Job Market Paper | Working paper

Abstract. This paper studies how labour market segmentation affects measured mismatch in the UK over 2016–2022. I combine Adzuna vacancies, UKHLS employment histories, occupational productivity and ESCO skill requirements. I compare SOC classifications with nine occupation clusters based on required skills and construct a complementary skill-domain allocation from career histories. Holding the number of occupation groups at nine, skill-based clustering produces larger movements in mismatch around 2020–2021 than the SOC major-group benchmark. Three-digit occupational mismatch also rises, showing that both aggregation and group composition matter. Fixed-share comparisons indicate sensitivity to vacancy composition. The skill-domain exercise uses fractional allocations and a separate weighting index. These comparisons show how the definition of the search market shapes estimates of reallocation frictions during the pandemic.

Occupational Structure and Occupational Mobility over the Last 30 Years in the UK

Working paper

Abstract. Using the British Household Panel Survey and the UK Household Longitudinal Study, this paper documents changes in occupational structure and worker mobility between 1991 and 2020. It examines employment polarisation, movements between occupations and differences across occupations in wages and automation exposure. Approximately half of observed job transitions occur across occupations. The analysis also points to particular mobility constraints for workers in occupations exposed to high automation risk.

Mental Health and Job Mobility

Work in progress

Abstract. This paper examines the relationship between psychological distress and job mobility using the UK Household Longitudinal Study. Pooled and individual fixed-effects estimates indicate positive associations between GHQ-12 scores and job changes. I also assess bereavement and local NHS Talking Therapies treatment-delay measures as potential instruments. Weak-instrument diagnostics and unresolved exclusion restrictions mean that the current evidence does not support a precise causal estimate. Additional descriptive analysis considers occupational switching and changes in occupations' stress-tolerance requirements.

Professional Activities

Royal Economic Society (RES) Annual Conference July 2026
Presented the Job Market Paper, "Skill-Based Labour Market Segmentation and Mismatch Dynamics in the UK, 2016–2022".

25th Journées Louis-André Gérard-Varet (LAGV), Aix-Marseille June 2026
Presented the Job Market Paper and chaired the *Labor 1* parallel session.

Industry Experience

Bank of Zhangjiakou (formerly Zhangjiakou City Commercial Bank) 2014–2019
Shijiazhuang Branch, China

- **Corporate lending (2016–2019):** Conducted investigations of corporate borrowers to support lending assessments.
- Worked on corporate loan origination and disbursement, followed by monitoring and management of outstanding loans.
- **Corporate account operations (2014–2016):** Processed non-cash transactions and administered corporate accounts.

Teaching Experience

Teaching Assistant, Applied Quantitative Research Methods (EFIM20010) 2023–2026
School of Economics, University of Bristol

- Facilitated Stata-based econometrics labs, explaining practical exercises, helping students troubleshoot code and interpret empirical results.
- Provided individual guidance throughout lab sessions, responding to questions as they arose and adapting explanations to students' needs.
- Independently taught tutorial classes in spring 2026, guiding students through weekly problem sets and explaining the intuition behind econometric methods.
- Supported learning in OLS, instrumental variables, difference-in-differences and time-series analysis, with emphasis on model interpretation and empirical applications.

Teaching Assistant, Economic Data (ECON10016) 2023–2026
School of Economics, University of Bristol

- Facilitated practical R and Microsoft Excel labs on sourcing, cleaning, analysing and visualising economic data.
- Explained lab tasks and circulated throughout sessions to help students resolve technical difficulties and answer questions individually.
- Guided students in interpreting economic indicators and selecting appropriate visualisations for communicating data patterns.
- Helped students develop confidence in applying quantitative tools through hands-on exercises and discussion.

Teaching Development

CREATE HEA Fellowship Scheme, University of Bristol January 2027
Planned participation. Professional development in reflective teaching practice and preparation for Associate Fellowship recognition.
